Instruction Objective

- ❖ I plan on teaching this class where I assume that you are a **beginner** in HTML and CSS. I believe a proper web designer should be able to develop a website from the ground up; by this I mean coding HTML and CSS from scratch without the use of pretty web design software.
- ❖ I feel people tend to skip over the basics and go right to the items they want to implement; however without a strong base, you cannot build anything without it collapsing.
